Height .. .. . 162.5 cm.

Leg length Hip to Heel .. .. . 99.0 cm.

N.B.—On account of the lower age of candidates a margin of up to 5.0 cm. in height and 2.5 cm. in leg length may be given, provided it is certified by the Medical Board that the candidate is likely to grow and come up to required standard on completion of his training at the National Defence Academy.

(b) *Weight*.—(i) Weight will be taken with the candidate fully stripped or with under pants only. In recording weight, fraction of half a kg. will not be noted. A correlation table between age, height and average weight is given below for guidance.

Age Period	15-16	16-17	17-18
Height (cm)	Weight (Kg.)	Weight (Kg.)	Weight (Kg.)
157.5	43.5	*—	—
160.5	45.0	46.5	—
162.5	46.5	48.0	50.0
165.0	48.0	50.0	52.5
167.5	49.0	51.0	52.5
170.0	51.0	52.5	54.5
172.5	52.5	54.5	56.0
175.5	54.5	56.0	58.0
178.0	56.0	58.0	60.0
180.0	58.5	60.0	62.0
183.0	61.0	62.5	64.5

(ii) It is not possible to lay down precise standards for weight in relation to height and age. The correlation table is therefore, only a guide and cannot be applied universally. A 10 per cent. departure from the average weight given in the table is to be considered as within normal limits. There may nevertheless be some individuals who according to the above standard may be overweight but from the general build of the body are fit in every respect. The overweight in such cases may be due to heavy bones and muscular development and not to obesity. Similarly for those who are under-weight, the criteria should be the general build of the body and proportionate development rather than rigid adherence to standards in the above table.

(c) *Chest*.—The chest should be well developed with a minimum range of expansion of 5.0 cm. The candidate's chest will be measured by making him stand erect with his feet together, and his arms raised over his head. The tape will be so adjusted round the chest that its upper edge touches the inferior angles of the shoulder blades behind, and its lower edge the upper part of the nipples in front. The arms will then be lowered to hang loosely by the side. Care will be taken that shoulders are not thrown upwards or backwards so as to displace the tape. The candidate will then be directed to take a deep inspiration several times and the maximum and minimum expansions of the chest will be carefully noted. The minimum and maximum will then be recorded in cm. 84/89, 86/91 etc.

In recording the measurements, fraction of less than half a centimeter should not be noted.

#### 4. Dental condition.

It should be ensured that a sufficient number of natural and sound teeth are present for efficient mastication.

(a) A candidate must have a minimum of 14 dental points to be acceptable. In order to assess the dental condition of an individual, points are allotted as under for teeth, in good apposition with corresponding teeth in the other jaw :

- (i) Central incisor, lateral incisor, canine, 1st and 2nd premolar and under-developed 3rd Molar—1 point each.
- (ii) 1st and 2nd molar and fully developed third molar—2 points each.

When all 32 teeth are present, there will be a total count of 22 points.

(b) The following teeth in good functional apposition must be present in each jaw :

- (i) Any 4 of the 6 anteriors.
- (ii) Any 6 of the 10 posteriors.

(c) Candidates suffering from severe pyorrhoëa will be rejected. Where the state of pyorrhoëa is such that in the opinion of the dental officer, it can be cured without extraction of teeth, the candidate may be accepted.

#### 5. Visual Standards.

(a) Visual acuity :

##### Standard I

(b) Audiometric Record

The candidate will have no loss of hearing in either ear at frequencies 128 to 4096 cycles per second (Audiometry reading between +10 and -10).
